

**kBTU/sq = kilo-British Thermal Unit per square foot**

The graph above illustrates the 2015 energy usages for the building for the first six months of the year. When compared against the baseline created by NORESKO in 2011, Cline Library appears to have improved efficiency for both fuel and electricity uses.

The graph below breaks down the monthly electricity use for the building in 2015. Once a complete calendar year of data has been collected, variations in usage patterns can be evaluated and used to develop additional energy conservation measures.
